handrail at the pond counter clockwise until the slide gate hits the guide stop.

Once the slide gate is open wash the entire area of the slide gate and opening. Wash the guide channel that the gate runs in and make sure to remove all dirt and mud from this channel as it is a catch all.

Wash the screw that opens the gate. This screw will be dirty and full of grease and dirt. At the base of the screw right under the hand rail is a small bearing that also needs to be washed really well. Make sure to remove all the grease from this small area as it catches lots of dust and dirt and makes it hard to open the slide gate.
